6. **\*\*When you are satisfied with your image, save it, print it, and start using it.\*\*** Photoshop is both an editing and a printing program. The other common issue that tends to arise when a Photoshop user is brand new to the program is what is referred to as a `cloned image`. In other words, what you do is copy and paste an image you've created onto a new layer; then edit it. The end result is often a flat image that bears no resemblance to the original. To avoid this, simply copy and paste the image you've already created to a new layer, then edit it on its own.

To date, the health impact of chronic infection with hepatitis C virus (HCV) is profound and continues to be a major unmet medical need. HCV is a + RNA virus of the Flaviviridae family that chronically infects more than 170 million people and is a leading cause of liver disease including cirrhosis, and hepatocellular carcinoma. Approximately 75% of those chronically infected with HCV develop a chronic HCV infection. The current standard treatment for HCV infection is a combination therapy of pegylated interferon-a (PEG-IFN) and ribavirin for a period of 6-24 months. Many patients, however, do not achieve a sustained virologic response (SVR) to this therapy. HCV is a difficult virus to treat for a number of reasons. Unlike other viruses, it has no known animal or cell culture model for study. In addition, HCV is genetically diverse, the virus has a high error rate during replication, it tolerates a high degree of genetic heterogeneity at the population level, and it encodes a protease that may cleave many of its own structural proteins. Thus, the development of new antiviral therapies for HCV is an ongoing process involving screening of an increasing number of molecular compounds for antiviral activity. There is a need in the art for the development of safer and more effective antiviral agents for the treatment of chronic HCV infection. The present invention fulfills this need and further provides other related advantages.

### What's New In?

I could not be more excited to learn that the developer of one of my favorite games, I am Setsuna, is working on a new RPG for consoles. We've all waited a while for a new Trails in the Sky game, but the wait is finally over. Kaleido is developing the game in partnership with the prolific Senjou no Kizuna author Akitoshi Kawazu. The fact that both the game's director and composer, Kenichi Hirata, and Kawazu are working on the game is a testament to the amazing skill of these three people. I have seen the first two trailers for the game and they show promise. I spoke with Chris Cross, President and CEO of Kaleido Game Studio, and Kenichi Hirata about working with Akitoshi Kawazu, their game and voice actors, and how the game relates to Trails of Cold Steel. It's been about a year since Kaleido opened. How have things changed in that time? We would like to thank you for your support and to share with you that we have been working very hard on Kaleido ever since our debut. As a result, the key Kaleido staff have consistently worked more than 80 hours per week in addition to other duties they're responsible for. We're currently developing games for a wide range of genres and use all kinds of content-creation tools. Until now, we had mainly focused on developing for consoles, but now we are also developing titles for VR. As for me personally, I'm also able to move between the two. As a result, there are many different kinds of experiences to expect from Kaleido. Are you happy with how things have gone so far? Yes, I'm very happy with the results we've achieved so far. Kaleido is actually still a startup and we are making money by selling games on consoles, but recently we've been able to increase our content budget. We've also been able to hire our first overseas staff, so we're expanding operations more and more. Also, we've been invited to discuss future plans with Nintendo and we would like to make innovative titles. Were there any hurdles you faced in the development of Kaleido? There are actually no such problems. Kaleido is a small team, so we don't have
