The logo can be brought up by clicking on the logo in the top left corner. The most common editing tools are located on the left side of the toolbox on the top. The tools are defaulted to the On position as there is a "1" icon on the top of the toolbox. Photoshop Elements comes with a bunch of default layers that we will use for the rest of this tutorial. The list of the default layers is shown in the bottom left corner of the interface. Layers Layers are the building blocks of all the photo editing features in Photoshop. Photoshop Elements has a selection of pre-created layers which allow us to easily add content to an image. The types of layers, order of the layers and even how many layers we can create are controlled by the user interface. In Photoshop Elements, we can have up to 25 layers. We can use the default layers and add custom ones as well. To add new layers, click on the plus (+) icon in the bottom left corner of the interface. Just like in the previous version of Photoshop, the default layer is organized and found on the top. To create a new layer, navigate to the Layers tab and click on the New Layer button on the right side. This will create a new layer and assign it to the current active layer in the image.
